

Abstract

Method for controlling a system, especially an electrical and/or electronic system comprising at least one application device

The invention relates to a method for controlling a system, especially an electrical and/or electronic system comprising at least one application device. To simplify and to facilitate the use of the system it is provided that control information input is interpreted in accordance with available application devices and an application device is controlled in accordance with the result of the interpretation.

1. A method for controlling a system, especially an electrical and/or electronic system comprising at least one application device, the method comprising the steps of: receiving control information input; interpreting the control information input in accordance with available application devices; and controlling an application device in accordance with the result of the interpretation.
